

Blake Pfaff

FRONT-END DEVELOPER / REACT & TYPESCRIPT

(224) 866-2209 | blake.a.pfaff2@gmail.com | linkedin.com/in/blake-a-pfaff

Front-end developer with seven years in production React and TypeScript. Owns features end to end, from component library to shipped UI, with a habit of turning legacy or no-code messes into code a team can actually maintain. Builds with agentic coding tools as part of the daily workflow, running Claude Code and GitHub Copilot to drive refactors and tests rather than writing every line by hand.

EXPERIENCE

Agile Brains

Oct 2025 – Present

Front End Developer

- Rebuilt a no-code platform's visual workflows as a real React and TypeScript codebase, trading untestable drag-and-drop logic for a component library the team can extend on its own.
- Runs Claude Code and GitHub Copilot daily to scaffold components, generate tests, and drive large refactors, reviewing and steering the output rather than hand-coding it.
- Cut app load times by roughly half and ironed out a long list of UI quirks by reworking state management around the app's REST calls.
- Cleared dozens of recurring UI bugs by folding copy-pasted logic into shared components.

Agilant Solutions

Dec 2022 – Aug 2025

Senior React Developer

- Shipped several client inventory apps in React and TypeScript, from first component to production.
- Redesigned how data moved through those apps, cutting the failures that had been dragging down reliability.
- Set the coding standards the team worked to and reviewed against, raising consistency across three projects.
- Mentored a junior developer and four interns, a couple of whom took over features they had needed help on before.

Platypus Technologies

Oct 2021 – Oct 2022

Application Developer

- Built accessible, responsive web and mobile interfaces in React and React Native with a cross-functional team.
- Constructed interactive dashboards in React Admin that gave users a clear, live view of the data they worked in every day.
- Wrote the unit and end-to-end tests that caught regressions before release.
- Handled Nest.js and Laravel back-end work, including the REST endpoints the front end relied on, so integration never became a bottleneck.

D'aprile Properties

Nov 2020 – Sep 2021

Full Stack Developer

- Built a custom CMS on Laravel 8 that ran multiple real estate sites from a single codebase.
- Shipped features for an agent performance-tracking app across Vue.js, Laravel, and Tailwind.

Dealer Inspire

Jun 2018 – Apr 2020

Front-End Web Developer

- Built and maintained dealership front-ends in HTML, SCSS, and jQuery, keeping a roster of client sites current.
- Worked directly with project managers to keep releases on schedule.

SKILLS

LANGUAGES

TypeScript, JavaScript, PHP, HTML5

FRONT END

React, React Native, Vue.js, React Query, Tailwind CSS, SCSS, CSS3, responsive design

BACK END & APIS

Nest.js, Laravel, REST integration

AI-ASSISTED DEV

Claude Code, GitHub Copilot, Cursor, agentic coding workflows

TOOLING

Git, Docker, end-to-end testing

PATTERNS

Component-driven UI, MVC, OOP
